

InfoObjects CASE STUDY

How Infoobjects Enabled End-to-End Testing using Generative AI and Innovative Methods

OVERVIEW

Leading edge testing enterprises faces challenges in achieving efficient end-to-end testing.

By leveraging Generative AI and employing transformative methods such as transforming user stories into test cases, automating integration testing with Ephemeral Environments, and utilizing preview URLs for acceptance testing, Infoobjects Consulting enabled the leading-edge enterprise in testing to achieve:

- Higher testing efficiency,
- Improved software quality,
- Accelerated development cycles.

This case study highlights the significance of integrating innovative methodologies and AI-driven approaches to revolutionize end-to-end testing processes in organizations.

“Infoobjects Consulting revolutionized our testing process through the implementation of ChatGPT and Generative AI. With their expertise, we can now effortlessly generate test cases and ephemeral test environments, ensuring the delivery of high-quality software that precisely caters to user requirements. We wholeheartedly recommend Infoobjects Consulting to streamline your testing procedures and expedite time-to-market, bringing unparalleled efficiency and excellence to your organization.”

Director of Engineering
Enterprise Test Automation Startup

APPROACH

Transform User Stories into Test Cases

- NLP technique
- Comprehensive test coverage
- Reduced manual effort

Utilize Preview URLs for Acceptance Testing

- Stakeholders to access and review
- Automate Integration testing
- Eliminate complex setup
- Faster feedback loops

Integration Testing with Ephemeral Environments

- Temporary & Self-contained testing environment
- Automate Integration testing
- Reduce manual dependency
- Enable Scalability

Technology Stack

- OpenAI GPT3.5 Model
- Fine-tuned Google Vertex Model
- Self-hosted LLM Model
- Cucumber Testing Framework
- User Interaction-based Code Generation

RESULTS

99%

Improved Test Coverage

42%

Accelerated Testing Cycles

60%

Reduced Manual Effort

CONCLUSION

Through their collaboration with Infoobjects Consulting, a leading edge testing enterprise successfully implemented end-to-end testing using Generative AI.

Test Case Transformation

- NLP Technique
- User stories into structured test cases
- Trained models on historical data
- Generate accurate and comprehensive test cases

Automation with Ephemeral Environments

- Automated integration testing
- Reduce manual effort and facilitate scalability

Integration of Preview URLs

- Stakeholders to review and validate software changes
- Efficient acceptance testing

Enterprises experienced improved testing efficiency, accelerated software development cycles, and enhanced overall software quality.
